

What I think could be a potential 3 pronged thesis

1. Aging User Base Drives Monetization Upside

Roblox is successfully shifting its daily active users toward an older demographic that has greater spending power, positioning the platform for higher average revenue per user and deeper engagement through more sophisticated, premium content.

2. Expanding Engagement Through New Formats and AI Tools

The launch of *Roblox Moments* and continued AI innovation in voice translation, natural-language creation, and speech APIs are extending user engagement, strengthening viral growth loops, and enabling seamless global communication that broadens Roblox's reach across markets.

3. Global Infrastructure Expansion Fuels Regional Growth

The new São Paulo data center underscores Roblox's commitment to improving performance in Latin America, its fastest-growing region, while advancing a broader cloud expansion across North America, Europe, and Asia to enhance reliability, user experience, and long-term scalability.

Question I want to answer first

1. Market & User Growth (Emily Zhang)

1. How are Roblox's daily active users (DAUs) and hours engaged per user trending across key regions, and what's driving or slowing growth?
2. How is Roblox expanding among older demographics (13+ and 17+), and what impact could this have on monetization?
3. How fast is Roblox growing internationally, especially in Latin America, Europe, and Asia, and how do new tools like real-time translation accelerate that?

2. Creator Economy & Monetization (Hrishita)

1. How is the 8.5% DevEx payout increase affecting creator economics and retention of top studios?
2. What share of overall revenue comes from top developers vs. smaller creators, and how diversified is the content ecosystem?
3. How are new monetization initiatives, in-game ads, branded experiences, and Moments, expected to expand average revenue per user (ARPU)?

3. Technology & AI Integration (Shaye)

1. How do Roblox's AI tools (4D Objects, Assistant, speech APIs) improve creator productivity and lower development barriers?
2. How does the Roblox Cloud and new São Paulo data center improve performance, scalability, and regional access?
3. How does Roblox's AI stack compare to competitors like Unity, Unreal, or Meta Horizon, and could it become a defensible advantage?

4. Financials, Valuation & Profitability (Mateo)

1. What are Roblox's recent trends in bookings, margins, and operating cash flow, and how does DevEx expansion impact profitability?
2. How do Roblox's valuation multiples (EV/Revenue, P/S) compare to peers in gaming, social, and UGC ecosystems?
3. What is Roblox's path to profitability over the next 2–3 years given its current R&D, infrastructure, and creator investment levels?

5. Strategic Partnerships & Competitive Landscape (Reyna)

1. How significant are partnerships with Mattel, Kodansha, and Lionsgate for driving branded content and new user segments?
2. How does Roblox Moments position the company against TikTok, YouTube Shorts, and other social platforms for engagement and discoverability?
3. What are Roblox's main competitive and regulatory risks, particularly related to content moderation and under-13 user safety?
